Cost Control

—
Enhanced Reliability

A Fulfillment Solution Designed for *Your* Business

As one of the world's leading nutraceutical & functional food product manufacturers, when it comes to warehousing, shipping and fulfillment – producing over 4,000 consumer products a year – we've seen it all.

Now we've put that experience to work in designing our new third-party logistics capability we call VQ Solutions.

VQ Solutions is a turnkey warehousing and fulfillment option that starts from the manufacturing floor and ends at your customer location.

Modern, Compliant Warehousing

It starts with our large, modern, centrally located warehouse facility in West Caldwell, NJ. This facility was designed for food-grade storage – and only houses nutraceutical products. Your products won't be stored next to tires, books and baby carriages. This temperature-controlled facility is GMP certified, FDA compliant and has FSSC2000 certification – the highest level of international food safety certification. Its modern design also makes it one of the most environmentally-friendly options you can find – and can enhance your sustainability messaging.

Our People Make It Happen

The VQ Solutions facilities are staffed by full-time, highly trained personnel who manage your program the entire way. We're always watching your products. Our teams can provide you with on-demand visibility to inventory, monthly inventory reports and professional documentation including bills of lading and packing lists.

At Vitaquest, we're passionate about providing top-flight customer service and we're always willing to work with you to improve your productivity.

Total Control of Your Inventory

The VQ Solutions Warehouse Management System has been specifically designed for third-party logistics applications and is built on Microsoft Dynamics. You'll be able to dynamically review your inventory status and generate reports from any location with a web browser.

Faster to Market with Better Reliability

With VQ Solutions, we offer daily United Parcel Service and LTL carrier pickup. We can help you ship when and where you need to – down to the case level. Utilization of our warehouse services will reduce your potential for LTL shipment damages and lower product spoilage risk by reducing the time it takes your products to reach their destination. We want to help you get your products to market faster – every time.

Controlling Your Costs

With VQ Solutions, you'll pay storage fees only for the space you use, and costs are based on transactions. Our relationships with delivery companies can translate into lower shipping costs for you. Most importantly, you'll be able to understand and plan for your costs - with no surprises.

Your Brand is Your Business

Increasingly, managing logistics is becoming a part of a company and its products brand – as it enhances your customers' experience with you.

Along with our manufacturing and packaging capability, **VQ Solutions** can help you build trust and consistently positive relationship with your customers – while maintaining compliance and quality and controlling your costs. You may not need all the services we provide, but they're here when and how you want them.
